

[Country Insights](#) [1]

We invest significantly in understanding the current economic landscape and dynamics in countries of our target operations. We upgrade our knowledge of macroeconomic and microeconomic environment in many CIS and Eastern European countries through dedicated research. We strive to constantly update our country profiles that present snapshots of the current economic environment of these countries. The results of non-proprietary research are disseminated to the general public while our clients get preferential access to more in-depth data and knowledge. It is also our privilege to serve the wider community of students and researchers by making available some of our results.
